August 2006

VALOGIX LAUNCHES NEW UPGRADES OF THEIR ADVANCED INVENTORY PLANNING AND OPTIMIZATION SOLUTIONS

Saratoga Springs, NY – August 17, 2006 – Valogix, Inc. announces the release of several new versions of their advanced inventory planning and optimization software. The new upgrades include **VALOGIX® Inventory Planner** for forecasting and planning any type of finished goods inventory; **VALOGIX® Parts Planner** for spare parts planning which includes reverse logistics planning, **VALOGIX® Retail Planner** for retail stock, and **VALOGIX® MultiLink** for companies that plan for multiple stocking locations including customer locations. These solutions are ideal for companies that need powerful, yet easy to use planning tools to solve more complex inventory requirements. Designed to improve inventory planning and employee productivity, Valogix's advanced technology automates the entire planning process, giving employees time to concentrate on activities that help to improve business performance like meeting customer needs and generating more positive cash flow.

Valogix incorporated many new, innovative features that enhance the planning experience. For example, it is often difficult to plan for new items due to lack of history. The new upgrades give the user the ability to use the Proxy History function for new items. This feature automatically generates a 12-month forecast and optimal stocking quantity on the first day the item is available in the system. More than 30 new features have been added which enhance the value gained on these easy to use, affordable solutions.

(more)

Valogix solutions improve financial performance by generating positive cash flow. Typical results are a) reduction of inventory investment of 20% to 40%; b) increased employee productivity; c) reduction in replenishment purchasing; d) improvement in employee and customer satisfaction; e) reduction emergency shipping to customers and expediting costs from suppliers.

Current Valogix users represent most major industries including Automotive Aftermarket, Aviation, Dental and Medical Supplies, Gourmet Foods, High Technology products, Home Furnishings, Industrial Distribution, Marine Products and Supplies, MRO, Office Equipment, Specialty Materials, Telecommunications, and more. These customers are gaining valuable returns on their investment and improving service to their customers. One customer stated, *“Because of the savings we’ve realized since using Valogix, we’ve been able to reduce the number of reschedules and grow our business without hiring new staff.”*

The new release speeds navigation through the solution with one click ease. Other enhancements include hot keys, custom mouse commands, rapid item search, and automated links to other software programs. All enhancements benefit users by saving time, effort, and money.

About Valogix

Valogix develops integrated inventory planning and optimization solutions. The advanced technology systems automatically forecast future demand, set stocking levels, create replenishment orders, and optimize the inventory.
