

VALOGIX[®] SaaS - Hosting Services

SaaS (Software-as-a-Service) is software that is deployed over the internet and is hosted and managed by a specialized hosting provider. After evaluating the top hosting providers, Valogix chose Savvis as its hosting partner. Savvis is the leading provider of cloud services according to Gartner's Magic Quadrant.*

Valogix is deploying its new applications using the Savvis Symphony Virtual Private Data Center (VPDC) cloud computing solution. The VPDC allows businesses to quickly and securely deploy a complete set of enterprise-class data center services without physically procuring, installing, configuring or managing any hardware. There is no software to install, no hardware to worry about and no manual upgrades to slow you down. Everything is managed for you, all you do is focus on planning and improving your inventory .

Valogix automated planning tools help to improve your competitive advantage. Valogix solutions allow you to work smarter by easily adapting all aspects of inventory management into one advanced, simple-to-use software product. Valogix software allows all levels of employees to understand the system. The solution is completely automated including forecasting, planning, replenishment and true optimization.

The Benefits of the Valogix SaaS Model

There are numerous benefits of the SaaS Supply Chain software delivery model. The following are potential advantages from going using a "Software as a Service" (SaaS) model.

Lower upfront capital: By going to a SaaS model you avoid the up-front capital requirements and funding requests, and pay for the software as an on-going expense.

Faster implementation: There is generally less overall set-up time, and in some cases, companies can often leverage the hosted solution's existing integrations with existing key ERP solutions. This means a faster "time-to-value." Given a more rapid implementation, the time-to-value and positive cash flow returns are more rapid than a traditionally deployed on-premise implementation.

Reduced internal IT resource requirements: No installed application software or hardware to manage over time.

Fit for "on-demand" usage: Users can truly access Valogix when they need to plan anytime and anywhere 24x7.

Delivery Via the Web - Fast with Easy Access Anytime and Anywhere in the World

Savvis Symphony VPDC is built on an enterprise-grade infrastructure that provides enterprise levels of availability, reliability, and security. The platform starts with best-of-breed hardware including Cisco networking and virtual fabrics, and uses industry-leading virtualization technology from VMware. The cloud provides total platform-level redundancy at all levels of the infrastructure. The infrastructure provides compute node and network path redundancy as well as storage mirroring to ensure high availability.
